

MULCHES, FINE MULCHES AND SOIL CONDITIONERS
MATERIAL SAFETY DATA SHEET

LONGALIFE® MIDNIGHT BLACK MULCH

Longalife® Midnight Black is made from recycled timber which has been ground and put through a colouring process using environmentally friendly products. The timber is produced by grinding with a hammer mill. Due to the mass of particles in their shortest dimension being minimum 12mm, the product is technically classified as a Fine Mulch. It is sold by loose volume in the form of cubic metres. Some settling will occur during transport.

Sample Analysis

This product was tested to Australian Standard AS 4454-2012, Composts, soil conditioners and mulches. Please see below for additional note.

Longalife Midnight Black has the following characteristics but should be used as a guide only:

PH	5	Boron (B)	4.9 mg/kg
Electrical Conductivity	0.52dS/m	Moisture	42.7%
Phosphorus	0.00%	Organic Matter	98.5% dry
Phosphate soluble	7.9 mg/L	Particle size grading	12mm min
Nitrogen Total *	0.09% dry wt		

Please note: * As a number of wood and bark based mulches are primarily for ground cover purposes, nitrogen is of little importance as the intention is not for fertilising properties. This is reflected in the testing and does not affect the purpose for which this mulch is intended.

Garden Use:

Longalife® Midnight Black is suitable for mulching and decorative purposes. Mulches should be applied to the soil surface and not dug into the soil. It is also important to keep mulches away from the stems of plants to prevent mould or fungal disease in the bark. A layer of between 50mm and 100mm will give the best results to retain moisture and prevent weed growth. In colder/wet weather the colorant takes longer to dry and for this reason, it is best to avoid watering the mulch for at least 24 hours to allow the colour to set. If purchased during rainy weather, cover mulch until rain has cleared, and then spread. See “Spring Wash” information sheet for further details.
